Pelican™ AIR OCP Tan colorant change

As part of our ongoing commitment to product quality and specification consistency, we have implemented a minor adjustment to the OCP Tan colorant formulation used in AIR case models.

AIR case models molded in OCP Tan produced on June 17 and thereafter, will be using an updated colorant that more closely aligns with the requirements and visual standards of the US government standardized AMS-STD-595A color system. Customers may observe a subtle visual difference between products manufactured before and after the effective date. The variation is minimal and falls within the intended scope of this enhancement. Please note however that there are no changes to the structural design, material composition, fit and certifications.

For inquiries, please reach out to Vince La Duca at Vince.LaDuca@Pelican.com
